2165

DATE MAILED: 02/07/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b> 09/964,954	<b>Applicant(s)</b> CLEGHORN ET AL.	
	<b>Examiner</b> Yicun Wu	<b>Art Unit</b> 2165	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 14 December 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-52 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-52 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### III. DETAILED ACTION

1. Claims 1-52 are presented for examination.

#### Response to Applicant' Remarks

2. Applicant argues:

(1) "do not specify formatting a database query" (page 13)

(2) "The present element describe a database, not a file server." (page 14).

(3) "The present element do not reformat" (page 14).

Examiner disagree.

With respect to the 1<sup>st</sup> argument, the Examiner consider "the query has to be translated, reformatted" and "in order to forward the query message to file server 22, the fields from the TCAP query have to be reformatted" (Col. 7, lines 45-67) reads on "formatting a database query".

With respect to the 2<sup>nd</sup> argument, the Examiner consider Reiman et al.'s "file server" reads on applicant's database. See col. 7, lines 45-67 and col. 8, lines 24-43).

With respect to the 3<sup>rd</sup> argument, the Examiner believe it is axiomatic that one cannot argue limitations not found in the claim.

**Claim Rejections - 35 USC § 102**

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-52 are rejected under 35 U.S.C. 102(e) as being anticipated over Reiman et al. (U.S. Patent 5,966,431).

As to Claims 1, 16, 31, 50 and 52, Reiman et al. discloses a method of processing a database query between one or more clients and one or more databases, the method comprising the steps of:

receiving the database query from one of the clients (col. 7, lines 45-49), the database query formatted using a first protocol (i.e. translating and converting of a message with a first protocol to a message with a second protocol. Col. 21, lines 24-29 and fig. 7);

selecting one of the databases to process the database query (i.e. the query has to be translated, reformatted, and

Art Unit: 2165

sent over the local area network (LAN) to a file server (of the 3 shown in the FIG. 1 embodiment) containing the line information database (LIDB) used for validation (col. 7, lines 50-55); translating the database query from the first protocol to a second protocol (col. 7, lines 50-55);

sending the translated database query to the selected database for processing (col. 7, lines 50-55);

receiving a response (i.e. response. col. 7, lines 54-67) to the database query from the selected database col. 7, lines 54-67), the response formatted using the second protocol (i.e. this response is then reformatted. col. 7, lines 54-67);

translating the response from the second protocol to the first protocol (i.e. reconvert the response packet. col. 7, lines 54-67);

determining which of the clients sent the database query (i.e. response is then forwarded to STP 11 with the called number in the layer that also contains the calling party addresses in the original query. col. 7, lines 54-67); and

sending the translated response to the client that sent the database query (i.e. response is then forwarded to STP 11 with the called number in the layer that also contains the calling party addresses in the original query. col. 7, lines 54-67).

Art Unit: 2165

As to Claims 2, 17 and 32, Reiman et al. discloses a method as recited in claim 1, further comprising

the step of validating the client (i.e. File servers 22 provide the call processing functionality required to receive the LIDB queries from the gateway, validate the queries and respond to the gateway. Col. 8, lines 24-26).

As to Claims 3, 18 and 33, Reiman et al. discloses a method comprising

the step of sending a time out response to the client that sent the database query whenever the translated response has not been received within a specified time period (i.e. within a given time out. col. 28, lines 36-41).

As to Claims 4, 19 and 34, Reiman et al. discloses a method comprising

the step of logging the database query (i.e. All data received from the service nodes, i.e. the gateways and the servers, are logged. Col. 17, lines 18-21).

As to Claims 5, 20 and 35, Reiman et al. discloses a method comprising

Art Unit: 2165

the step of storing an address identifier for the client that sent the database query (i.e. with the called number in the layer that also contains the calling party addresses in the original query. col. 7, lines 54-67).

As to Claims 6, 21 and 36, Reiman et al. discloses a method comprising

the step of storing a query identifier for the database query (col. 20, lines 56-60).

As to Claims 7, 22 and 37, Reiman et al. discloses a method wherein the steps of sending the translated database query to the selected database for processing and receiving a response to the database query from the selected database, the response formatted using the second protocol comprise the steps of:

encrypting the translated database query ( i.e. encrypted. Col. 15, lines 50-51);

sending the encrypted database query ( i.e. encrypted. Col. 15, lines 50-51) to the selected database for processing (col. 7, lines 50-55);

receiving an encrypted response to the encrypted database query from the selected database, the response formatted using the second protocol (i.e. translating and converting of a

Art Unit: 2165

message with a first protocol to a message with a second protocol. Col. 21, lines 24-29 and fig. 7); and

decrypting the encrypted ( i.e. encrypted. Col. 15, lines 50-51) response into a response (i.e. response. col. 7, lines 54-67) .

As to Claims 8, 23 and 39, Reiman et al. discloses a method as wherein

the first protocol is an Internet protocol (i.e. inter-network. Col. 7, lines 62-64) .

As to Claims 9, 24 and 40, Reiman et al. discloses a method as wherein

the second protocol is a signaling protocol (i.e. signaling protocol. Col. 3, lines 22-24) .

As to Claims 10, 25 and 41, Reiman et al. discloses a method as wherein

the signaling protocol is a Signaling System 7 protocol (col. 4, lines 62-67) .

As to Claims 11, 26 and 45, Reiman et al. discloses a method wherein

Art Unit: 2165

the database query is part of a call validation process (i.e. File servers 22 provide the call processing functionality required to receive the LIDB queries from the gateway, validate the queries and respond to the gateway. Col. 8, lines 24-26).

As to Claims 12, 27 and 46, Reiman et al. discloses a method wherein

the database query is part of a call billing process (i.e. i.e. billing. Col. 9, lines 60-65 and Col. 8, lines 24-26)).

As to Claims 13, 28 and 47, Reiman et al. discloses a method wherein

the database query is part of a bank card validation process (i.e. File servers 22 provide the call processing functionality required to receive the LIDB queries from the gateway, validate the queries and respond to the gateway. Col. 8, lines 24-26).

As to Claims 14, 29 and 48, Reiman et al. discloses a method wherein

the database query is part of a bank card settlement process (i.e. File servers 22 provide the call processing

Art Unit: 2165

functionality required to receive the LIDB queries from the gateway, validate the queries and respond to the gateway. Col. 8, lines 24-26).

As to Claims 15, 30 and 49, Reiman et al. discloses a method wherein

the selected database is a line information database line information database (i.e. line information database. Col. 7, lines 50-55).

As to Claim 38, Reiman et al. discloses a method wherein the computer and the server/router module comprise:

a first computer communicably (fig. 1) coupled to the one or more clients (col. 7, lines 45-49);

a second computer communicably (fig. 1) to the one or more network servers (fig. 1);

a server module resident on the first computer (i.e. server fig. 1), the server module receiving the database query from one of the clients (i.e. query. col. 7, lines 45-49), the database query formatted using a first protocol (i.e. translating and converting of a message with a first protocol to a message with a second protocol. Col. 21, lines 24-29 and fig. 7), sending the database query to the second computer (fig. 1), and sending a

Art Unit: 2165

translated response to the client that sent the database query (i.e. this response is then reformatted and sent back to STP11. col. 7, lines 45-67); and

a router module resident on the second computer (fig. 1), the router module selecting one of the network servers and one of the databases to process the database query (fig. 1 and col. 7, lines 45-67), sending the database query to the selected network server (fig. 1 and col. 7, lines 45-67), determining which of the clients sent the database query (fig. 1 and col. 7, lines 45-67), and sending the translated response to the first computer (i.e. translating and converting of a message with a first protocol to a message with a second protocol. Col. 21, lines 24-29 and fig. 7).

As to Claim 42, Reiman et al. discloses a system wherein at least one of the network servers is a service control point (fig. 1 and col. 7, lines 50-55).

As to Claim 43, Reiman et al. discloses a system wherein at least one of the network servers is a legacy server (fig. 1 and col. 7, lines 50-55).

As to Claim 44, Reiman et al. discloses a system wherein

Art Unit: 2165

at least one of the network servers is a bank server (fig. 1 and col. 7, lines 50-55).

As to Claim 51, Reiman et al. discloses a method wherein the database is at least one of

a client (fig. 1 and col. 7, lines 50-55);

the client (fig. 1 and col. 7, lines 50-55);

a part of the client (fig. 1 and col. 7, lines 50-55);

a server (fig. 1 and col. 7, lines 50-55).

Art Unit: 2165

5. **THIS ACTION IS MADE FINAL**, Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory- period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136 (a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply-expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 2165
